Southtowns # 2
TITLE: Towards a sustainable future
Design Principles:
1. Encourage infill including office light industrial near urban and village centers.
2. Encourage development through zoning in the areas that we want growth-to help take development pressure off of open land.
3. Enhance public transportation to serve densely populated areas.
4. Provide open space corridors along intervals leading to lake and riverfronts.
Notes:
- Encourage office or industrial on infill sites near village centers and urban centers.
